

General Instructions

1. This internship is self-paced and unpaid, with no formal training provided. However, you are encouraged to seek assistance from friends or any available resources if additional support is required.
2. Use dummy or sample data like dataset, contents, images whenever necessary to complete your project.
3. Complete any one project of your choice from your selected Internship Domain.
4. You can complete more projects from your selected internship domain if you want.
5. Create complete documentation and project report about your project and upload it on your google drive. You need to share drive link in project submission form.
6. Project Submission form shared with you along with project list, Kindly submit projects before mentioned deadlines in mail.
7. You are free to show your creativity and inputs whenever necessary during task.

Data Analytics

Project 1: Social Media Engagement Analysis

Problem Statement: A company wants to understand its social media engagement but lacks insights into user interactions. The goal is to analyze social media data to measure engagement, identify popular content, and optimize posting strategies.

Objectives:

- Collect and preprocess social media engagement data.
- Identify key metrics for measuring engagement.
- Analyze popular content and posting patterns.
- Provide recommendations for improving social media engagement.

Key Tasks:

- Collect and clean social media engagement data.
- Define and calculate relevant engagement metrics.
- Create visualizations to represent engagement trends.
- Analyze popular content and posting frequencies.

Goals:

- Measure and understand social media engagement.
- Identify content that resonates with the audience.
- Improve social media posting strategies.

Scope:

- Data collection and preprocessing.
- Engagement metric definition and calculation.
- Data visualization.
- Content analysis and posting strategy recommendations.

Data Analytics

Project 2: Employee Productivity Analysis

Problem Statement: A company wants to assess employee productivity and identify factors influencing performance. The goal is to analyze employee data to measure productivity, identify patterns, and recommend improvements.

Objectives:

- Analyze employee performance data.
- Define productivity metrics and benchmarks.
- Identify factors influencing employee productivity.
- Provide recommendations for enhancing productivity.

Key Tasks:

- Clean and preprocess employee performance data.
- Define and calculate productivity metrics.
- Analyze patterns and correlations in the data.
- Provide insights and recommendations for improvement.

Goals:

- Measure and understand employee productivity.
- Identify factors affecting performance.
- Recommend strategies for improving productivity.

Scope:

- Data cleaning and preprocessing.
- Definition and calculation of productivity metrics.
- Data analysis and pattern identification.
- Recommendations for productivity enhancement.

Data Analytics

Project 3: Website Traffic Analysis

Problem Statement: A company's website is not performing as expected, and there's a need to understand user behavior. The goal is to analyze website traffic data to identify popular pages, user navigation patterns, and areas for improvement.

Objectives:

- Analyze website traffic data.
- Identify popular pages, entry points, and exit points.
- Analyze user navigation patterns and behavior.
- Provide recommendations for website optimization.

Key Tasks:

- Collect and preprocess website traffic data.
- Define and calculate key metrics (e.g., page views, bounce rates).
- Create visualizations to represent user navigation patterns.
- Analyze areas for website optimization.

Goals:

- Understand user behavior on the website.
- Identify popular pages and navigation patterns.
- Provide recommendations for website improvement.

Scope:

- Data collection and preprocessing.
- Definition and calculation of website traffic metrics.
- Data visualization.
- Recommendations for website optimization.
